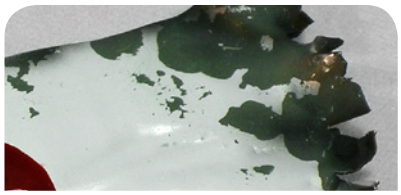
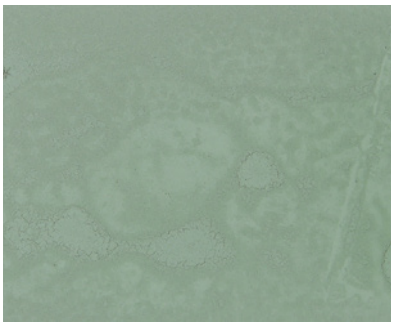
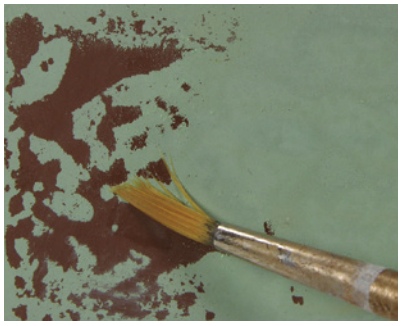
AK 089
HEAVY CHIPPING

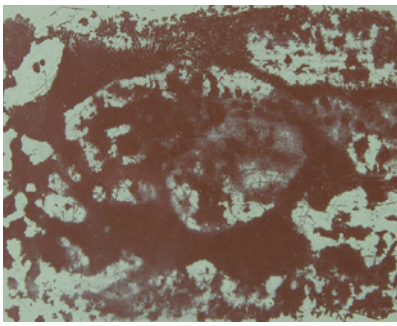
You can´t beat the original. Our Heavy Chipping fluid is tried, true and consistent. An acrylic product that can effectively eliminate the need for hairspray which yields inconsistent results due to different chemical make-ups, formulations and properties from one brand to another. One major advantage of choosing our chipping fluid instead of hairspray is having the ability to alter the intensity of your chips by using

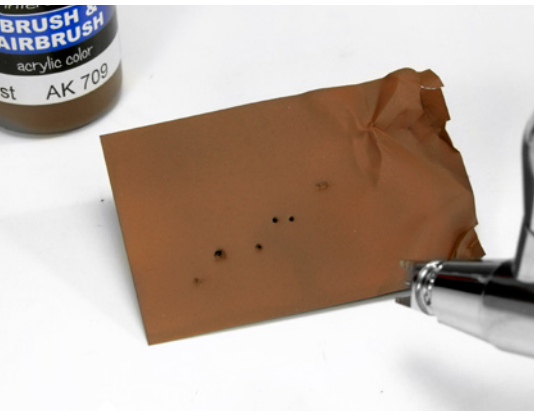


"Heavy Chipping" for large chips and "Worn Effects" for the more subtle chips and scratches. Now tell me what can of hairspray can do that? Hairspray gives you no control while AK Chipping Fluids can be applied by brush or airbrush.



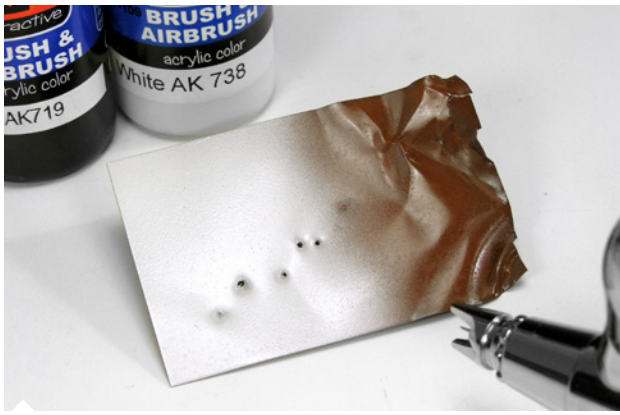






Initially give a layer of rust color to the whole piece or part of it.

Then airbrush a pair of layers with the Heavey Chipping liquid.



Once dry, apply the color layer to be chipped, light gray in this case.

Wet the surface with water and with stiff bristle brushes rub on the paint noting that the paint starts to chip out achieving the desired effect. We can also use other useful tools as a toothpick, needles etc.

Observe how the effect is different from that obtained with the AK088.

We can create different effects to represent paint chipping friction or shocks revealing the layer beneath it.
