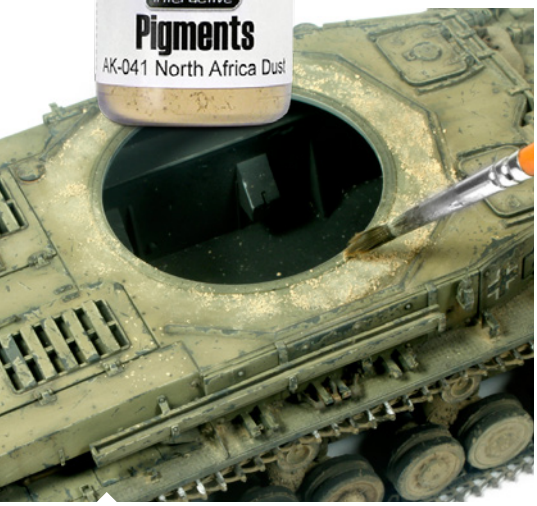
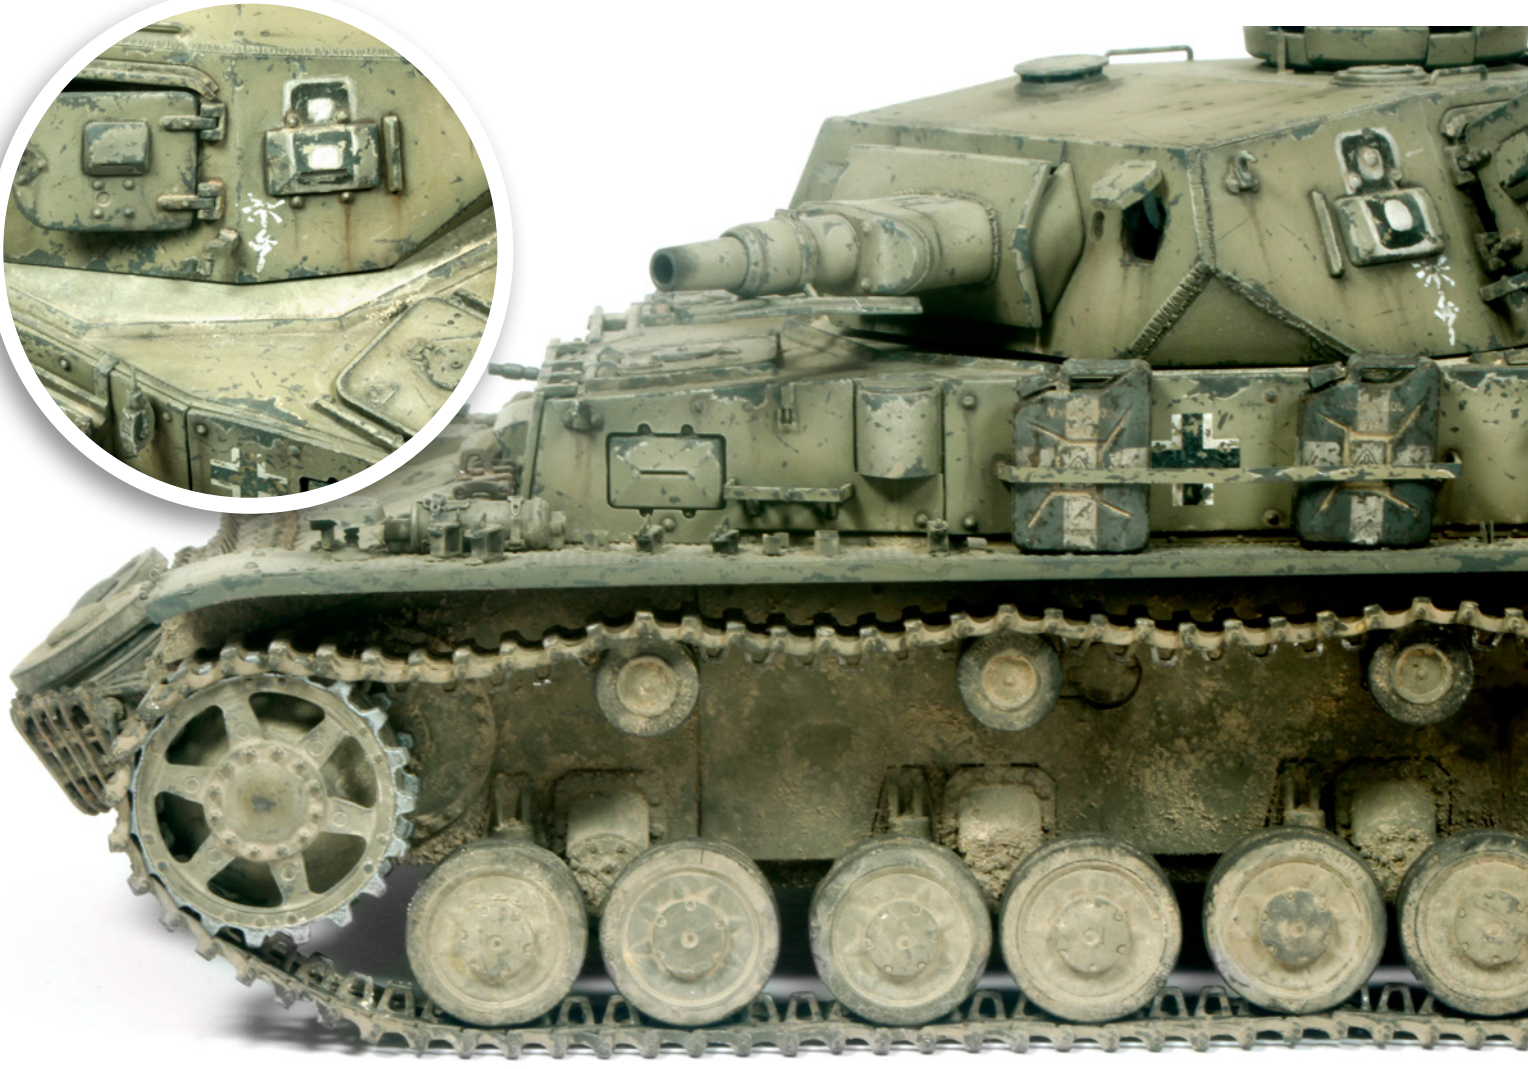
HOW TO USE PRODUCT GUIDE

AK 041
NORTH AFRICA DUST

The name says it all. This pigment is especially created to give your model that typical dusty look found in the dry climates of North Africa. When applied onto a matt paint coat this pigment doesn't actually need a Fixer, but nevertheless to avoid the treated surface to be disrupted we recommend to use a Fixer anyway.



Apply the pigments with a medium size brush and spread them equally over the surface.

Use another clean brush and fix the pigments with White Spirit or Pigment Fixer.


When the fixer has dried you have a realistic dusty finish. An easy technique with great results.
